

## DESCRIPTION

The model PF5 provides a dc output which is linearly proportional to the phase angle difference between voltage and current of an ac power system. The polarity of the bidirectional output indicates leading or lagging conditions.

Balanced load conditions are necessary in three-phase systems. Deviation from sine wave conditions leads to inaccuracies with all transducers since angle measurement is based on the time difference between zero crossings.

## FEATURES

- The bidirectional output of the model PF5 is directly proportional to the 0° to 60° leading or lagging phase angle of the input signal.
- A leading phase angle results in a negative output signal.
- A lagging phase angle results in a positive output signal.

## APPLICATIONS

- Provides an accurate means for calculating power factor,  $PF = \cos\phi$

### 1-PHASE, 2-WIRE MODELS

| VOLTAGE INPUT (VL-L) | CURRENT INPUT (Aac) | STANDARD OUTPUTS, MODEL PF5- |          |            |             |
|----------------------|---------------------|------------------------------|----------|------------|-------------|
|                      |                     | 0-1mAdc*                     | 0-10Vdc* | 4-20mAdc** | 4/12/20mAdc |
| 95 - 135             | 0.2 to 5.0          | 001A                         | 001C     | 001E       | 001EM       |
|                      | 0.3 to 10.0         | 010A                         | 010C     | 010E       | 010EM       |
|                      | 1.0 to 20.0         | 019A                         | 019C     | 019E       | 019EM       |
| 200 - 300            | 0.2 to 5.0          | 002A                         | 002C     | 002E       | 002EM       |
|                      | 0.3 to 10.0         | 011A                         | 011C     | 011E       | 011EM       |
|                      | 1.0 to 20.0         | 020A                         | 020C     | 020E       | 020EM       |
| 410 - 550            | 0.2 to 5.0          | 003A                         | 003C     | 003E       | 003EM       |
|                      | 0.3 to 10.0         | 012A                         | 012C     | 012E       | 012EM       |
|                      | 1.0 to 20.0         | 021A                         | 021C     | 021E       | 021EM       |

### 3-PHASE, 3-WIRE OR 3-PHASE, 4-WIRE MODELS

| VOLTAGE INPUT (VL-L) | CURRENT INPUT (Aac) | STANDARD OUTPUTS, MODEL PF5- |          |            |             |
|----------------------|---------------------|------------------------------|----------|------------|-------------|
|                      |                     | 0-1mAdc*                     | 0-10Vdc* | 4-20mAdc** | 4/12/20mAdc |
| 95 - 135             | 0.2 to 5.0          | 004A                         | 004C     | 004E       | 004EM       |
|                      | 0.3 to 10.0         | 013A                         | 013C     | 013E       | 013EM       |
|                      | 1.0 to 20.0         | 022A                         | 022C     | 022E       | 022EM       |
| 200 - 300            | 0.2 to 5.0          | 005A                         | 005C     | 005E       | 005EM       |
|                      | 0.3 to 10.0         | 014A                         | 014C     | 014E       | 014EM       |
|                      | 1.0 to 20.0         | 023A                         | 023C     | 023E       | 023EM       |
| 410 - 550            | 0.2 to 5.0          | 006A                         | 006C     | 006E       | 006EM       |
|                      | 0.3 to 10.0         | 015A                         | 015C     | 015E       | 015EM       |
|                      | 1.0 to 20.0         | 024A                         | 024C     | 024E       | 024EM       |

\*Denotes self-powered unit. All other models require 85-135Vac instrument power.

\*\*4-20mA models for use **only on lagging power factor**. (unidirectional output)

Higher current ranges available - consult factory.

**5 YEAR WARRANTY**

## ORDERING INFORMATION

Example:  
3Φ4W 208Vac, 10Aac  
Input with bidirectional  
10Vdc Output

**PF5-014C**

## SPECIFICATIONS

### INPUT

Current ..... (See Tables)  
Voltage ..... (See Tables)  
Frequency Range ..... 50-60Hz  
Burden  
Voltage ..... 2.0VA  
Current ..... 0.4VA  
Overload (Continuous)  
Voltage ..... 135Vac Range ..... 175Vac  
300Vac Range ..... 350Vac  
550Vac Range ..... 600Vac  
Current ..... 5Aac Range ..... 10Aac  
10Aac Range ..... 20Aac  
20Aac Range ..... 30Aac

### INSTRUMENT POWER

"A" and "C" models ..... Self-Powered  
"E" and "EM" models ..... 85-135Vac, 50-400Hz, 3.5VA  
"-22" Option ..... 230Vac ±15%, 50/60Hz

### DIELECTRIC TEST

Input/Output/Case ..... 1500Vac

### OUTPUT

Type ..... (See Tables)  
Span ..... (Current In. ref. Volts In.) ..... +60° to 0 to -60°  
Current leads Voltage ..... Negative Output  
Current lags Voltage ..... Positive Output  
Loading ..... "A" models ..... 0-10kΩ  
"C" models ..... 2kΩ, min.  
"E" & "EM" models ..... 0-500Ω  
Response Time (to 90%) ..... 400ms  
Field-adjustable Cal. ..... ±10%

**ACCURACY** ..... ±0.5% of Span  
(includes combined effects of voltage, current & frequency)

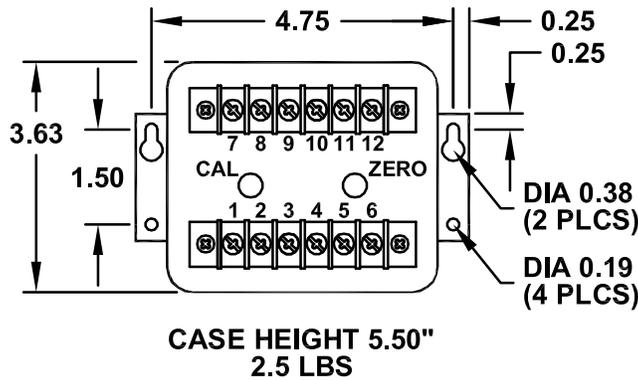

### TEMPERATURE

Operating Range ..... -20°C to 60°C  
Effect ..... ±0.5% F.S.

**CONNECTION DIAGRAMS**

**SINGLE-PHASE CONNECTIONS**

**THREE-PHASE CONNECTIONS**

**INSTALLATION NOTE:** Proper installation of the model PF5 Phase Angle Transducer is critical. *The connection diagrams shown above must be followed precisely.* If the application requires the use of current transformers, insure that polarity is correct. Any deviation from the connections shown will result in a locked full-scale output signal.
