These measurements form the basis for the comprehensive analysis and assessment of the electrical system in all 4 quadrants.

DESCRIPTION

The A230 or A230S Power Meter measures and displays the voltage, current, power, and energy quantities in single-phase or three-phase power systems. The meter's multifunction capability replaces a large number of analog measurement and display devices.

A high-contrast LED display in a compact, panel-mount package provides low-cost, high-visibility control panel monitoring. The basic instrument provides up to 266 measurements combinations that can be displayed on three 4-digit LED displays.

MM/COM modules for the A230 and A230S extend the instrument's functionality by adding communication options, analog outputs, and data memory. Add the A200plus PC application software for easy meter programming and remote data access at no additional cost.
