

OSI THREE-PHASE AC CURRENT TRANSDUCER MODEL 3CT5

THREE CURRENT TRANSDUCERS IN ONE ENCLOSURE

DESCRIPTION

The model 3CT5 is a three-phase ac current transducer which provides three isolated dc outputs which are directly proportional to the three current inputs. The output is derived from the average absolute value of the input and is calibrated in terms of the RMS value of the input sine wave. Models with full-scale input ranges of 25A and higher use external sensors (CTs). With the exception of models which provide 4-20mA outputs, all models are self-powered from the measured line.

FEATURES

- Accurate, reliable current measurement
- Three separate inputs, three outputs
- Input/Output isolation

APPLICATIONS

- Designed for use in three-phase applications which require inexpensive current measurement
- Designed to withstand motor start-up transients

* "A", "C", and "CX5" models are self-powered from measured line.

** "E2" models are 4-20mA loop-powered, and require 15-24Vdc.

† Indicates two turns required through transformer window.

Standard "E" models require 115Vac instrument power.

For optional 230Vac instrument power - add suffix "- 22".

For optional "3 outputs summed" - add suffix "X668". This option provides a single output proportional to the average level of the 3 inputs.
