

# OSI HALL-EFFECT CURRENT TRANSDUCER MODEL CTLP-

## LOOP POWERED

## MODEL SELECTION

### DESCRIPTION

The model CTLP is a Hall-effect current sensor with signal conditioning in a single compact package. Hall-effect current measurement is a non-contact technique that measures the magnetizing effects of current flowing in a conductor. Advantages of this technique include high electrical isolation between the measured conductor and transducer output, high over-range capability and fast response to input changes.

This loop-powered design simplifies installation by reducing instrument power and output signal connections to a simple 2-wire interface.
